History and Mission

SGS Health Science enables the medical and health innovators of the world to deliver life-changing solutions in the quickest, safest and most efficient way, helping improve the lives of many. We provide the highest quality services, reliable expertise since 40+ years and guidance through our network of laboratories conveniently located around the globe to deliver harmonised quality and scientific solutions to our biotechnology and pharmaceutical partners.

Highlights

SGS Analytics as part of SGS Health Science provides global Central Lab Services incl. customized visit kits and instructions for the clinical study sites. Our solution-minded project management teams oversee materials expiry and global sample logistics at ambient, cooled or frozen condition. Our specialized labs offer a broad analytical portfolio, from safety analysis, biomarkers to PK, PD, immunogenicity and GMP testing, all according to highest quality standards. Highly customized lab reports and data transfers result in further advantages, as easy automated uploads to eCRFs.

Services

Study Services

- Customized, visit-specific kit building
- Supply of kits and ancillary material to sites including expiry tracking
- Worldwide samples logistics at ambient, cooled and frozen temperature
- Extended sample storage at ambient temperature, 2-8°C, -20°C, -80°C or liquid N₂
- Global study data base, identical lab reports worldwide
- Customized lab reports and data transfers
- Committed and experienced project and data management, providing local support and global oversight
- Secure online access
- Services also available as stand-alone services

Customized Lab Services

- Assay development
- Method validation according to EMA/FDA guidelines
- PBMC/BMMC cell isolation
- Biomarker screening and development

Analytical Services

- 24/7 lab service for early phase trials
- Safety analysis (hematology, biochemistry, serology, ...)
- Advanced analytical spectrum (advanced coagulation panel, large allergy panel, immunological analysis, PK, PD, immunogenicity, biomarkers)
- Genetics incl. NGS
- Histopathology and cytology
- Experience with various matrices (serum, plasma, CSF, ascites, bone marrow, ...)

Quality Assurance

- GCP, GCLP compliant
- Independent QA department
- Periodic audits from customers as well as inspections by the relevant agencies incl. FDA
- 21 CFR Part 11 compliant study database
- Quality Agreements in place with other SGS labs
